

Hello...

This is a  
homework

Yaaaaaaaaaaaaay!

Btw, this work was made by a random dude

Called João Marques

I almost forgot

This homework is about.....

# Grace “Bug” Hopper

(December 9, 1906 – January 1, 1992)

She was

an American computer scientist and United States Navy rear admiral.

One of the first programmers of the **Harvard Mark I** computer.

Pioneer of computer programming who invented one of the first compiler related tools.

Moth in the machine!!!!!!!

**Did she really invent the term ‘bug’  
to describe software errors?**

**No!**

# September 9, 1945

The incident happened on the Harvard Mark II computer where the technical team looked at panel F and found a moth between points in relay 70.

They solved the problem and taped the bug to the log book.

Grace Hopper just added the caption "First actual case of bug being found" and **BAAAAAAM**, she was famous as quick as Justin Bieber!

# Say it out loud, **who invented then?**

Well, inventors and engineers had been talking about bugs for more than a century before this “accident”.
